IFRS 17 Compliance Guide

1. Overview

This document defines IFRS 17 "Insurance Contracts" implementation requirements for insurance technology systems, covering data collection, measurement models, allocation calculations, and disclosure reporting. It is intended for developers and operators of data platforms, actuarial systems, and financial systems.

2. IFRS 17 Core Concepts

2.1 Key Changes

Aspect	IFRS 4 (Old)	IFRS 17 (New)
Revenue Recognition	Premiums received	Based on insurance service provision
Profit Recognition	Day-1 profit recognized fully	Gradual release via CSM
Discount Rate	Not mandatory	Must reflect time value
Assumption Updates	Not locked	Regular updates required
Disclosures	Limited	Significantly expanded

2.2 Key Metrics

Term	Abbr	Description
Contractual Service Margin	CSM	Unearned profit, released as service provided
Insurance Revenue	-	Revenue based on services provided
Insurance Service Expenses	-	Claims and expenses incurred
Insurance Finance Income /Expenses	-	Financial impact of discount rate changes
Onerous Contract	-	Expected losses > income
Fulfillment Cash Flows	FCF	PV of future cash flows + risk adjustment

3. Measurement Models

Model	Applicability	Key Features
GMM/BBA	Default model	Periodic CSM release, regular assumption updates
PAA	Coverage $\leq$ 1 year	Simplified, approximates premium revenue
VFA	Direct participating contracts	CSM reflects investment volatility

4. Technical System Requirements

4.1 Data Requirements

Data Dimension	Description	Source System
Policy-level data	Cash flow projections per policy	Underwriting/Policy
Grouping	Annual/cohort grouping	Grouping rules engine
Actuarial assumptions	Mortality, lapse, expense	Actuarial system
Discount curve	Yield curves by tenor	Investment/Market data
Actual experience	Actual claims, lapses, expenses	Claims/Policy/Finance
Contract modification	Policy change records	Servicing system

4.2 Calculation Flow

Data Collection → Grouping → Cash Flow Projection → Discounting → Risk Adjustment → CSM Calculation → P&L Recognition → Report Generation

4.3 System Architecture

Source Systems → IFRS 17 Calculation Engine → General Ledger → Disclosure Reports

5. Disclosure Requirements

Disclosure	Technical Implementation
Insurance contract reconciliation	Opening → Changes → Closing
Revenue analysis	By product/channel/region
CSM reconciliation	Opening → additions → interest → release → experience → closing
Onerous contract details	Initial recognition and subsequent measurement
Discount rate assumptions	Yield curve by tenor
Risk adjustment	Methodology, confidence level
Claims development triangle	Historical claims development

6. Implementation Checklist

Task	Owner	Milestone
Data requirements analysis	Data Architect	T+0

Task	Owner	Milestone
Calculation engine selection	Tech Architect	T+15
Source system interface changes	System Teams	T+60
Data pipeline (O DS→DWD→D WS)	Data Platform	T+90
Engine deployment & testing	Actuarial + Dev	T+120
Financial reconciliation	Dev + Finance	T+150
UAT sign-off	Actuarial + Finance + Audit	T+180
